

The full journey of implementing electric vehicle infrastructure

START

ELECTRIFICATION ROADMAP

1

Review goals; understand capital constraints; interview key personnel; begin program creation

SITE ASSESSMENT

Review zoning, power capacity, space, condition, and easements; analyze existing power sources

3

SITE SELECTION

Perform corporate-level due diligence; prioritize identified target sites

2

CONCEPT DEVELOPMENT

Determine vehicles per location; verify charger output requirements; calculate future fleet growth

4

PROGRAM MANAGEMENT & IMPLEMENTATION

Provide architectural and engineering management; install chargers and controls software

6

CONCEPT DESIGN

Obtain permitting; develop lighting, security, and equipment specification

5

COMMISSIONING

Complete install and commissioning of equipment; confirm operability per specs

7

ONGOING SUPPORT SERVICES

Establish routine maintenance schedule; confirm charge management strategy; provide tech guidance

9

ENERGIZE

Provide training on equipment usage and safety requirements; integrate and initiate controls software

8

FINISH

Want to know more?

Do you have questions about implementing an EV program? Please contact Chateau Energy Solutions to discuss what is the best solution for you.
